http://www.linkedin.com/in/sulthan-s

SUMMARY

Aspiring Data Scientist with a strong analytical foundation and hands-on experience gained through a structured Data Science internship. Proficient in Python, data preprocessing, and foundational machine learning techniques including regression and classification models. Motivated to apply predictive modeling and analytical skills to solve real-world business problems.

SKILLS

- **Technical Skills:**
  - **Programming & Libraries:** Python, SQL, Pandas, NumPy
  - **Machine Learning (Foundational):** Scikit-learn, Linear Regression, Logistic Regression, Classification Models
  - **Statistics & Data Preparation:** Feature Engineering, Missing Value Treatment, Correlation Analysis, Hypothesis Testing
  - **Visualization & Tools:** Matplotlib, Seaborn, Jupyter Notebook, Google Colab
- **Professional Skills:** Problem Solving, Communication

PROJECTS

- **Housing in Mexico – Regression Model**
  - Tools: Python, Pandas, NumPy, Scikit-learn, Matplotlib
  - Developed a regression model to predict housing prices using multiple features such as area, location, and number of rooms
  - Performed data preprocessing, feature selection, and train-test splitting
  - Evaluated model performance and visualized predicted vs actual values.
- **House Price Prediction – Bangalore Dataset**
  - **Tools:** Python, Pandas, Scikit-learn (Linear Regression), Matplotlib
  - Built a machine learning model to predict apartment prices in Bangalore
  - Cleaned and preprocessed data, handled missing values, and engineered features
  - Compared actual vs predicted prices to assess model accuracy
- **Divvy Bikes – Exploratory Data Analysis**
  - **Tools:** Python, Pandas, Matplotlib, Seaborn
  - Conducted exploratory data analysis to identify trends in trip duration and station usage
  - Performed univariate and bivariate analysis
  - Created visualizations to communicate insights effectively
- **Air Quality Forecasting in Nairobi**
  - Built a time series forecasting model to predict air quality levels in Nairobi using an Autoregressive (AR) model**.**
  - Implemented walk-forward validation to evaluate real-world forecasting performance and reduce look-ahead bias.
  - Achieved a **Mean Absolute Error (MAE) of 3.9**, demonstrating reliable short-term air quality predictions.

INTERNSHIPS

- **RP2 | Data Science Intern** **Jul 2025 – Present, Ernakulam, Kerala**
  - Gained hands-on experience with Python libraries (Pandas, NumPy, Matplotlib), SQL, and Tableau for data analysis.
  - Performed data cleaning, EDA, and feature preparation on structured datasets.
  - Explored foundational machine learning concepts and model workflows as part of the learning process.

EDUCATION

- BSc in PHYSICS | KERALA University | 2020 - 2023
